

All Touch of Class Transportation Chauffeur Driven Vehicles Will be Equipped with Wireless Internet Access

Touch of Class Transportation has ordered wireless internet access equipment for immediate installation into its entire fleet of vehicles.

Princeton, New Jersey ([PRWebDirect](#)) June 13, 2007 -- Touch of Class Transportation, of Princeton, New Jersey, announced today that it has ordered wireless internet access equipment for immediate installation into its entire fleet of vehicles. Touch of Class customers will be able to access the Internet during trips thru either a Wi-Fi, or Ethernet connection.

"This value added service will be offered in all of our vehicles for no additional charge," said Jeffery Hitt, Touch of Class' President and General Manager. "We have been testing a variety of equipment and service providers for a period of time and feel we have selected the best possible combination to provide quality, speed and dependability to our customers," added Hitt. "The response from the business executives and VIPs that make up the majority of our customers has been extremely positive. More than almost any other tool available to business travelers, this service provides the ability to make their time in the vehicle, which can be more than an hour for many central New Jersey customers, more productive," Hitt continued.

To provide customers with the in-car Internet service, Touch of Class uses mobile cellular routers designed by WAAV, of Cambridge, MA. Unlike traditional wireless routers which must remain stationary in order to create hotspots, WAAV's routers work both in place and on the go. With WAAV routers, users are able to create their own mobile Wi-Fi hotspots wherever they are, instead of depending on hotspots from "brick and mortar" locations such as airports, cafés or hotels. With connections at broadband speeds, users are able to access the Internet the same way they would from an office or home connection.

About Touch of Class:

Touch of Class Transportation was established in 1983, is one of New Jersey's largest chauffeured services companies and has over 100 years of combined transportation management experience within its ranks. Touch of Class is known for a passionate commitment to service and old fashioned attention to detail.
